

NIVXRAY

DECODER / THREAT-LAB

v2.0 · Feb 2026

nivxray.nivxforge.com

NIVXRAY · SALES · CONFIDENTIAL

SALES PITCH

Turn one obfuscated PowerShell one-liner into a full SOC verdict in under 8 seconds.

*Hybrid deterministic + LLM analyst platform. 97 decoder ops. MITRE / LOLBAS / YARA mapped.
Built for tier-1 to tier-3 SOC teams.*

Analysts drown in encoded payloads.

Every alert ships with a base64/gzip/xor blob. Manual triage costs minutes per stage.

- ▶ **CyberChef is a toolbox, not a decision engine.**
Analyst still owns 100 % of the interpretation.
- ▶ **Sandboxes are slow and noisy.**
3-10 minutes per detonation, no unified verdict, no MITRE mapping.
- ▶ **EDR tells you SOMETHING ran — not WHAT it does.**
Command-line telemetry arrives obfuscated by design.
- ▶ **LLM-only triage hallucinates.**
Without deterministic ground truth, verdicts drift.

NivXRay — deterministic first, LLM only when it earns its keep.

A hybrid pipeline that races 97 decoders, matches known wrapper archetypes, then hands the aggregate to a MoE analyst panel.

DETERMINISTIC CORE

97 decode ops · 40+ wrapper archetypes
Base64 / Gzip / RC4 / XOR / UTF-16LE / raw-
DEFLATE salvage
PowerShell variable resolver · shellcode
prologue detection

THREAT INTELLIGENCE

VirusTotal · AlienVault OTX · AbuseIPDB
URLScan · Hybrid Analysis · Shodan · GreyNoise
Live IOC enrichment + auto-defang

AI ANALYST LAYER

MoE panel: Malware / Red-Team / Defensive +
Synthesizer
Investigation timelines · Attack-path graph
Analyst Corrections feedback loop ("Teach
NivXRay")

One workspace. Zero context-switching.

Paste any payload → verdict + MITRE + LOLBAS + attack graph in one screen.

[Workspace screenshot]

The numbers that actually land in a QBR.

Measured across 12 SOC design partners, Q4-2025 → Q1-2026.

AUDIT TRAIL (DETERMINISTIC RECIPE)

Every finding ships with a deterministic recipe — analysts can replay it, test it, and pin it as a regression. No 'the LLM said so' verdicts.

Empire-style PowerShell one-liner → verdict in one click.

Input on the left, aggregate SOC verdict on the right. No manual step in between.

INPUT · one paste

```
powershell.exe -NoProfile -WindowStyle Hidden
-NonInteractive -Command
"IO.Compression.GzipStream"
$b='H4sICD12mFwCA2NvZGUAc0v...';
$m=New-Object IO.MemoryStream(
,[Convert]::FromBase64String($b));
$g=New-Object IO.Compression.GzipStream(
$m,[IO.Compression.CompressionMode]
::Decompress);
$r=New-Object IO.StreamReader($g);
IEX $r.ReadToEnd();
```

OUTPUT · unified SOC verdict

MALICIOUS · 100/100

Family: Destructive Wiper / Ransomware Precursor

Engine: archetype:PS_MemoryStream_Gzip_IEX (conf 100)

MITRE: T1059.001 · T1140 · T1490 · T1070.001 · T1485

LOLBAS: powershell, vssadmin, wbadmin, wevtutil,
fsutil, cipher

Kill-chain: 3-stage · chain-amplified risk +5/stage

Time to verdict: 3.4 s (deterministic path)

vs. the tools your team already uses.

Not a replacement for EDR — the layer between raw command-line and the incident report.

CAPABILITY	CYBERCHEF	ANY.RUN	JOE SANDBOX	NIVXRAY
87+ decoder ops	✓	–	–	✓
Multi-stage chain aggr.	–	–	–	✓

On-prem / air-gapped	✓	–	✓	✓

Built for three seats — priced for the security budget line.

SOC LEAD / MSSP

Cut analyst wheel-spin on obfuscation. Ship reproducible verdicts to clients.

DETECTION ENGINEER

Turn every triaged payload into a YARA/Sigma seed with one click.

IR / THREAT HUNTER

Chain multi-stage ClickFix loaders and get one MITRE-mapped narrative.

Runs where your SOC data has to run.

SaaS, private cloud, or fully air-gapped with an offline LLM. Same feature parity.

- ▶ **Deployment modes**

SaaS (single-tenant) · Docker Compose · Kubernetes Helm · Air-gapped bundle

- ▶ **Data residency**

You bring your own MongoDB + object store. No payload leaves the tenant.

- ▶ **Auth & audit**

JWT + owner-scoped investigations · full recipe replay · role-based admin

- ▶ **LLM privacy**

Ships with pluggable providers · offline fine-tuned model available for high-trust envs

Shipped, shipping, next.

SHIPPED · Q1 26

- ▶ 87 decoder ops
- ▶ Wrapper archetypes v2
- ▶ MoE analyst panel
- ▶ Analyst corrections loop
- ▶ Multi-stage chain analysis
- ▶ Destructive-wiper classifier
- ▶ Corrupt-gzip salvage

NEXT · Q2 26

- ▶ RSS threat-intel crawler
- ▶ Change-password UI
- ▶ Full-chain re-aggregation
- ▶ Chain-break red edges
- ▶ Reverse-engineering page
- ▶ STIX 2.1 export

VISION · H2 26

- ▶ Auto-benchmarking harness
- ▶ Offline-LLM fine-tuning UI
- ▶ TAXII 2.1 push
- ▶ Detection-engineering copilot
- ▶ Live IR collaboration

READY TO TRIAGE THE HARD ONE?

Book a 30-minute live demo.

Bring us your worst PowerShell one-liner. We'll verdict it live.
